EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

The following is an Examiner's Statement of Reasons for Allowance: After a detailed search of the prior art, the documents cited on the attached form PTO-892 and discussed below are deemed to be the closest known prior art. All of the cited prior art documents fail to disclose or reasonably suggest a fiber optic parametric oscillator comprising a *microstructure optical fiber* as the primary component, but also comprising means for generating a pump wave, a reflective mirror means, a diffraction grating, and a beamsplitter, wherein the elements are arranged and interconnected as set forth in the claims. The cited prior art documents also fail to disclose or reasonably suggest a fiber optic parametric oscillator comprising a fiber optical *ring cavity* with at least a portion thereof formed from a *microstructure optical fiber*, the oscillator also including means for generating a pump wave coupled to the ring cavity. Since the cited prior art documents represent the closest known prior art, claims 1-63 herein are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

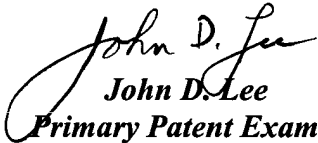

DISCUSSION OF THE CITED PRIOR ART

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,757,096 to Schiller shows a fiber optic parametric oscillator comprising a *microstructure optical fiber* as the primary component, but this oscillator does not include a diffraction grating. Likewise, U.S. Patent 6,801,356 to Broderick et al shows a fiber optic parametric oscillator comprising a *microstructure (holey) optical fiber* as the primary

component, but this oscillator also does not include a diffraction grating. U.S. Patent 6,897,434 to Kumar et al shows a microstructure optical fiber used in conjunction with an optical parametric oscillator.

Any inquiry concerning the merits of this communication should be directed to Examiner John D. Lee at telephone number (571) 272-2351. The Examiner's normal work schedule is Tuesday through Friday, 6:30 AM to 5:00 PM.
